

**DISCOVER THE BENEFITS OF OUR
SEATTLE ENGINEERED WOOD SHUTTERS**

WELCOME TO SEATTLE

For over 20 years, we have provided home owners like yourselves with the best quality products that we can, selecting only the finest materials so that you receive the best design and get the best life out of your shutters.

Not only do our shutters maintain their beautiful appearance over the years, they ensure trouble free operation and provide perfect light control for your home.

AVAILABLE IN FULL
HEIGHT, TIER ON
TIER, CAFE AND
TRACKED STYLES.

WHAT IS SO SPECIAL ABOUT OUR SEATTLE SHUTTERS?

- The primary material of Seattle shutters is Engineered Wood, also known as MDF (Medium-Density Fibreboard); this composite wood is structured together internally with Laminated Veneer Lumber (LVL), strong and hard wearing strips of wood bonded together to form a rigid core, so you know that the stability of your shutters is unquestionable and are twist and warp resistant.
- The Engineered Wood of Seattle shutters is coated with a Polypropylene (PP) coating, which is available in 6 on-trend colour choices to match the style of your home perfectly. This coating also provides extra protection against scratching, chipping and staining. The UV inhibitors in the coating also resists yellowing, so you know that your shutters will not be affected over time.
- The louvres in these shutters move in unison with the Easy Tilt louvre drive system, done so without the use of a tilt rod. This optional gear driven system can be built into each side panel and operates with precision to ensure the ultimate light control. Tilt rods are also available in all styles.
- Seattle shutters are covered by a comprehensive 3 year warranty for extra peace of mind.

AN ALL YEAR ROUND SOLUTION FOR YOUR HOME:

IN THE COLDER MONTHS

- Windows are responsible for 18% of a home's heat loss - our shutters help to reduce that heat loss by up to 36%.
- The edge to edge structure provides effective thermal insulation, helping to keep your home warm.
- Shutters help to minimise any draughts coming from your windows.

IN THE WARMER MONTHS

- Keeping your shutter louvres closed during heatwaves helps to keep your rooms cool.
- Ensures privacy whilst letting in natural light.
